Course: CS253

Mentor TA: *Sumit*

Date: 23rd April, 2023

### **1. Changes in SRS Document**

- Updated the use case diagrams, and corrected the signUp use case. Changed the use case of accept/reject bids with the concept of ending the auction before the end date and accepting the current highest bid.
- Added interface diagrams for all major user interfaces
- Updated the Software interfaces section by including details of endpoints and handlers, mentioning the GET/POST requests in each function
- Changed a few (highlighted) functional requirements based on the slight modification in the concept of accept/reject bids in our project.
- Added data dictionary.
- Updated Section 2(Overall Description)

### **2. Changes in the Implementation Document**

- Updated the implementation details section to highlight use of javascript in the codebase
- Mentioned the new frontend files and tests file in the codebase section of the document
- Updated the Future Development plan with newer ideas and approaches that are implementable and necessary.

### **3. Changes in Design Document**

- Update the class diagrams by removing the login class and the product database class.
- Added more attributes and functions in the remaining classes based on the structure of the project.
- Updated the use case diagrams, and corrected the signUp use case. Changed the use case of accept/reject bids with the concept of ending the auction before the end date and accepting the current highest bid.
- Updated the sequence diagrams for User Login, Bidding for a product, Listing a Product and Ending the auction for an item.
- Removed the sequence diagram for Canceling a bid.
- Updated the State Diagram
- Updated the Architecture Diagram.
